

Metformin & Iodinated IV Contrast Patient Information Sheet

Patient Name:

DOB:

MMI:

GFR:

You received iodinated CT IV contrast as part of your imaging examination. Because your renal function GFR is <30 mL/min, you should stop taking any metformin-containing medication starting now and resume the medication 48 hours from now. Below is a list of all prescription medications that contain metformin.

| | |
|---------------------------------------|-------------------------------------|
| metformin | Glucophage |
| Glumetza | Riomet |
| Fortamet | Glucovance (glyburide/metformin) |
| Metaglip (glipizide/metformin) | Synjardy (empagliflozin/metformin) |
| Xigduo (dapagliflozin/metformin) | Invokamet (canagliflozin/metformin) |
| Janumet (sitagliptin/metformin) | Kanzano (alogliptin/metformin) |
| Jentadueto (linagliptin/metformin) | Kombiglyze (saxagliptin/metformin) |
| ACTOplus Met (pioglitazone/metformin) | Avandamet (rosiglitazone/metformin) |

Please contact your clinician if you have any questions or need additional instructions regarding your medication.
