

# **CTA Abdominal Aorta (Abdomen/Pelvis)**

Updated  
4/27/2024

Indications - chest pain, aneurysm, dissection, aneurysm repair including open repair and endograft.  
Bill under CT Angio Combo AP w/ and w/o Contrast Charge.

## **GENERAL SCAN NOTES**

Move the patient's arms over his/her head if possible. Remove any metal from the imaging field of view.

Topogram - lung bases through pubic symphysis (obtained during end inspiration).

Craniocaudal scan coverage - lung bases through pubic symphysis on all phases (obtained during end inspiration).

**Only do a delayed phase if there is a stent/endograft in the aorta.**

Adjust FOV (field of view) on topogram to smallest without cropping anatomy.

IV Contrast:

Administer weight-based **Omnipaque-350** - **1 mL/kg** up to **150 mL** (100 mL minimum).

Inject at **4 mL/sec** followed by 40 mL saline flush, 20-gauge or larger in forearm or more proximal.

Bolus track off **proximal abdominal aorta** triggered at **100 HU**.

Oral Contrast: generally not given for this protocol.

For **GE scanners**, it is essential for the 1st recon thickness on the scanner to match the 1st recon thickness in this protocol book for the prescribed Noise Index to be valid. The 1st recon should generally be the thickest recon in the protocol.
